

SOLUTION FOR  
DISINFECTION  
IN CASE OF  
DIFFERENT  
VIRUSES AND  
BACTERIA

DISINFECTION DOOR/TUNNEL

In the COVID19 situation and the danger of quickly and easily spread of the virus, we cannot rely on of the usual hygiene practices and habits. For the safety of all employees and companies visitors, it is necessary to respect the preventive measure and take care that everyone is disinfected before entering the business building.

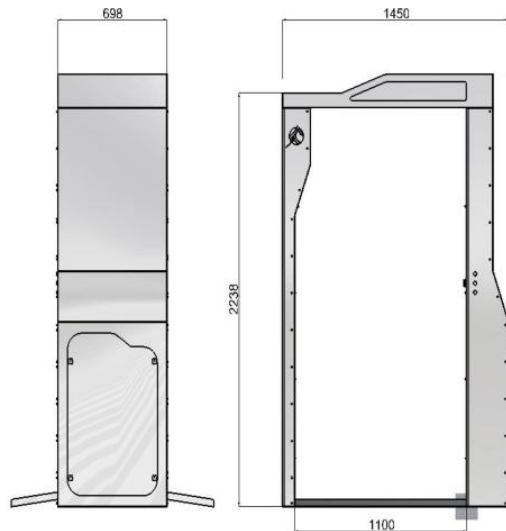

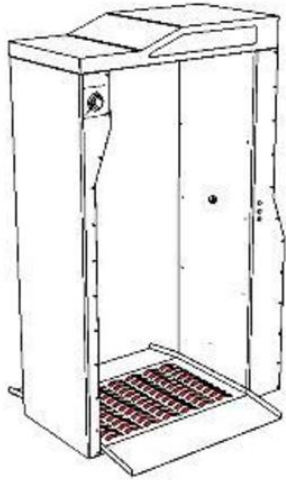

For complete disinfection, we offer the so-called Disinfection Tunnel or Door that is placed at the entrance to the business place and through which everyone passes, both employees and guests.

The advantage of this disinfection is that it is sprayed with disinfectants that disinfect the entire body surface, not just the legs and arms, in just 4 seconds with minimal consumption of disinfectants.

Disinfection tunnel / doors are fully automated, sensors detect a person and activate the disinfection process.
